

Build an AI-Powered Chatbot

with Amazon Lex, Bedrock & S3

A chatbot that answers from your own documents — RAG in action.

The Problem

Before

- Repetitive questions
- Overloaded support agents
- Manual FAQ upkeep
- Slow, inconsistent answers

After

- Instant self-service answers
- Grounded in your docs
- Agents freed for hard cases
- Always up to date

Amazon Lex

Conversational AI — voice & text

Alexa

Same tech that
powers Alexa

Amazon Lex

Alexa's engine,
for developers

QnAIntent

GenAI FAQ
from your data

Lex uses the deep learning behind Alexa — automatic speech recognition and natural language understanding — for building bots.

Amazon Bedrock

Foundation models, fully managed.
